

UPDATED PUBLICATIONS NOTICE

1) *Index of Titles and Authors in Environmental Conservation**

The Index for 1974–86 (both inclusive), and its first Supplement (covering the years 1987 and 1988), are still available from the undersigned at the price (for the two, including surface postage) of US \$40† or 60‡ Swiss francs *as long as stocks last*. It is anticipated that most of our subscribers, at least, will wish to possess a copy of this pioneering Index of which the first part, with its 9,399 entries occupying 159 pages in the format of the Journal, alone approaches twice the basic length of one of our issues but still costs less! Moreover this price will include full payment also for a further Supplement, covering the 5 years 1989–93, which is due to be sent in 1994 free to all registered purchasers of the original Index.

Referencing, as it does, seemingly the vast majority of leading Authors and topics that emerged during the formative years of the environmental–conservational movement or ‘revolution’, the Index with its Supplements should represent a valuable tool for researchers and a propitious guide for writers. This was borne out by our own experience during its original compilation, when already it proved to be a most useful work of reference, ‘... altogether constituting a unique chronicle of the environmental–conservational concerns of modern times’ (according to the Foreword by the then Executive Director of the United Nations Environment Programme, Dr Mostafa K. Tolba).

2) *Full Sets and Back Numbers of Environmental Conservation*

We still have a few complete sets of *Environmental Conservation*, from its beginning with the Spring issue of 1974, available for purchase by or for worthy ‘homes’. Back numbers can usually be supplied to fill gaps at a cost of US \$10 apiece.

3) *Copies of Ecosystem Theory and Application*

We also have some residual copies available (at US \$40 each, including postage) of *Ecosystem Theory and Application*, published in 1986 by John Wiley & Sons in the President’s series of Environmental Monographs & Symposia.

4) *Publication of first book of Environmental Challenges*

In July 1993 the Foundation for Environmental Conservation co-published the first of its planned ‘Original Paperbacks: Readers by Leaders’. Entitled *Environmental Challenges: From Stockholm to Rio and Beyond*, it has a Foreword by Mrs Gro Harlem Brundtland and an Introduction by its Editors, Mohammad Nazim & Nicholas Polunin, with early chapters by Mostafa K. Tolba, Nafis Sadik, Birgitta Dahl, and Arthur H. Westing; included among later chapters are those headed by Bert Bolin, Sandro M. Radicella, and Maurice F. Strong. The price (including postage) is US \$12 for individuals and US \$20 for institutions.§

5) *Plans for Further Original Paperbacks on Environmental Challenges (probably one each year)*

The next of these is to be on the theme of *Population and Global Security*. It is aimed primarily at offering unbiased enlightenment to participants in the United Nations’ crucial International Conference on Population and Development, to be held in Cairo, Egypt, from 5–13 September 1994, and will hopefully be published in the preceding early June at US \$15 for individuals or US \$25 for institutions. It is planned to comprise 12 survey-chapters on the most pertinent topics by leading exponents starting with Dr Nafis Sadik, Secretary-General of the Cairo Conference, and ending with Dr Martin W. Holdgate, Director-General of IUCN. In addition the Editors of these inexpensive Original Paperbacks have made a list of some 50 ideas for due consideration for further such books provided sufficient wherewithal materializes, there being no shortage of appropriate and often eager Authors.

6) *Proceedings of Our Fourth International Conference on Environmental Future (ICEF)*

Surviving With The Biosphere was published in December 1993 by Edinburgh University Press, 22 George Square, Edinburgh EH8 9LF, Scotland, UK at £85 hardbound. Edited by Nicholas Polunin & Sir John Burnett, ‘This volume [of about 600 pages with numerous illustrations] details the urgent global action required to preserve’ Mankind and Nature’s all-too-fragile only habitat, The Biosphere, based on the presented contributions and lively discussions of a galaxy of leading conservationists at the Foundation’s Budapest Conference.

7) *World Who’s Who in Environment & Conservation*

After years of preparation, work is now proceeding apace on the Foundation’s long-planned *World Who’s Who in Environment & Conservation: Leading Specialists, Administrators, and Benefactors*. This is planned to contain, besides helpful Appendixes, detailed biographies of all who respond satisfactorily of the seemingly most eminent and/or active living men and women involved anywhere in its all-important duality of subjects. Being a large undertaking for a tiny office and sole Compiler, this pioneering work is expected to take a further year at least to substantiate even sufficiently for publication of the first instalment.
